This corrigendum corrects the colour-scale bar units for Fig. 4a and c in the mentioned paper. The correct units are as follows.
Figure 4. Land-use change-induced changes in hydrological flows (current land-use—potential vegetation scenario): (a) absolute change in evaporation, (b) relative change in evaporation, (c) absolute change in precipitation, (d) relative change in precipitation, (e) absolute change in continental precipitation recycling ratio (i.e. precipitation with terrestrial origin divided by total precipitation \(P_{\text{tracked}}/P\) and converted to the unit of percent), (f) relative change in continental precipitation recycling ratio, (g) absolute change in river flows at outlet, and (h) relative change in river flows at outlet.
